Service life of Baytec®

Dear Mr. Pike,

our spray system Baytec® TP. PU 0308 / Desmodur® TP. PU 0309 has been used for many years in waterproofing applications of bridge decks.

Based on the experience with this system over the last 20 years we would expect a service life of 30 years under optimum working conditions. Precondition is, that the system is applied by an approved applicator according to state of the art manufacturing instructions and that it is not subject to unusual mechanical or chemical attack.

Under these conditions Baytec will not suffer degradation of material composition during the service life.

Kind Regards

Dr. Marc Schütze
Manager Spraying & Reinforcement
